BID #030-BB03 - CUBAN BREAD AND PASTRIES

Submission of Nutrient Data* to the School District from the Food Manufacturer

Instructions

A value must be submitted for each required nutrient per serving, edible portion, in the unit of measure indicated, and to the number of decimal places indicated on the form. If a food item does not contain a specific nutrient, enter zero. Do not leave any spaces blank on the data submission form. If any required nutrient values are missing, the food product can not be entered into the local database.

Nutrient data are to be submitted on the "**as served**" basis for any food that does not have ingredients added in preparation of fat absorbed during preparation.

Nutrient data are to be submitted on the '**as purchased**' basis for 1) any foods that have ingredients added in preparation, such as milk, eggs, and oil added to baked product mixes; 2) foods that have varying preparation methods, i.e., bake or fry; 3) foods that are prepared by frying; and 4) any food that gains or loses moisture during preparation. Additional data are required for "as purchased" nutrient data submissions.

If a food item gains or loses fat during preparation, provide the percentage of fat gain or loss when the product is prepared.

_____ +/- change.

Secondly, if a food item gains or loses moisture during preparation, provide the percentage of moisture gain or loss when the product is prepared.

_____ +/- moisture change.

Fat may be gained or lost in cooking some foods, thereby changing the caloric value of food. Methods of preparation such as breading, frying or baking, affect this fat gain or loss. For example, chicken baked in the oven will lose fat during cooking, while batter-coated or breaded chicken that is deepfried will gain fat during cooking. If fat is absorbed or gained, calories will be increased. If fat is lost, calories will be decreased. In recipes where a fat gain or loss occurs, the fat changes are limited to those ingredients that are cooked together. For example, a fat gain occurs in deep-frying of French fries because fat is absorbed by the ingredients in the food item. Fat is lost from a broiled hamburger patty in which the fat has been drained.

This information will be used to develop and analyze the nutritional content of the recipe and will allow each school district to prepare the food products according to regional preference.

* Do not submit this data to the USDA National Nutrient Database-Child Nutrition Program. To submit to the National Database - phone (301)436-3536 and request the official data form.
