District level oversight is required to ensure that technology devices and other assets are utilized efficiently and at the lowest possible capital and operational cost. Proposals are being solicited from qualified individuals and/or firms for the implementation and maintenance of a user and mobile friendly, web-based, electronic management asset management system, which will serve to assist district and school administrators to ensure accountability for technology equipment purchase with local and federal resources.

The District is sourcing an Enterprise Asset Management System (EAMS) that can receive, track, and inventory this equipment to meet grant requirements and reduce the time for schools and district personnel to receive, distribute, and inventory equipment that resides in school and homes. A centralized, web-based tool for technology equipment management will support accountability, insurance coverage, budget requests, asset replacements, and upgrades.

The EAMS should combine features typically associated with an EAMS, such as inventory management across buildings, classrooms, students and staff, historical tracking of assets, ease of adding inventory by district, department, or school building, tracking devices using scanners and barcodes, tracking damage equipment, obligation management, inventory audit, and equipment transfer.

During the evaluation of this RFP, the District may request a product demonstration as part of the oral presentation and/or a mock-up of programs to be developed. It is required that in the event of termination of this contract, all District data information structures will be returned and owned by the District.

## SECTION 4.2.1 – SCOPE OF WORK

This RFP allows vendors to reply to specific modules within the core requirements delineated below. All vendors must respond to the section, "CORE REQUIREMENTS FOR EVALUATION." The District does not have a preference for cloud vs locally hosted implementations; it depends on the cost, turn-around time, and the effectiveness of the solution offered.

The District is seeking an integrated "off the shelf" packaged solution that will meet its core requirements out of the box with minimal modifications. The District expects the supplier to perform the related professional services (e.g., best practices guidance, training, project management, implementation, integration, inventory, initial asset data import, and report development training) in a timely and professional manner with EAMS experts. The system must be scalable and have the ability to expand the technology and the functions.

The successful supplier shall be responsible for the final District approved design, installation, implementation, and commissioning of the EAMS system including development of user acceptance testing, system integration and connectivity to existing resources.

## EAMS SYSTEM: REQUIREMENTS

- Mobile Device Management (MDM) Integrations: the platform must integrate at a minimum with Microsoft (MS) SCCM, MS Intune, and Google Chrome Console.
- Inventory Lifecycle Management: the platform must track the full lifecycle of devices. The platform must keep a detailed record of changes made to every device with advanced filtered reports. The platform must automatically track changes to ownership, location, hardware internals, and other crucial asset data.
- Store images or other files associated with Assets: The platform must have the ability to attach files to assets such as photos of damage, a police report for a stolen device, or a related purchase order for an asset.
- Link assets or associate asset groups: Allow for assets to be flexibly linked to other assets (example link a series of laptops to a charging/storage cart and the cart to a particular teacher). Assets should also be able to be placed into custom groups created by system administrators for further flexibility in inventory management and reporting.
- Bulk actions for asset management: The ability to provide batch actions for assets is required which include bulk assign/unassign devices, print asset labels, link devices, change asset data, etc.
- Inventory Management with Rapid Barcode Scanning: The platform must have the ability to scan multiple barcodes in succession and manage all the scanned assets efficiently using bulk actions.
- Native iOS and Android Mobile Apps with Scanning Capability: Mobile scanning to manage assets is
  required The platform must make use of the camera on mobile devices to quickly scan asset tags or
  student IDs for device distribution or collection.
- Asset Check-in & Check-out Interface: An intuitive scan interface that instantly assigns a student device during distribution or a location during collection while retaining detailed repair and ownership history that is maintained from initial assignment, during storage, and through device re-issuing.
- Device Collection and Detailed Device Storage: The platform must support detailed collection and instant storage assignment upon scanning, such as sequencing through numbered box slots that coordinate with a specified storage cart or facility.
- Integrated Help Ticketing for Quick Ticket Creation During Device Collection: The platform must be capable of opening a help ticket associated with a scanned device without abandoning the process of device collection in the event of hardware/software repairs being necessary.
- Classroom-level inventory distribution, collection, and auditing tools for teachers: The platform should integrate with the District's Student Information System (SIS) to roster data and allow teachers to see a view of students in their class and quickly distribute, collect, or conduct an audit of student assigned devices. This should be done through the UI, a connected scanner, or by using a device's webcam.
- Fees & Fines Management— The platform must have a fees feature whereby repair/replacement fees can be linked to users, assets, and tickets. The platform should, at a minimum, log fees; record payments; and generate invoices. The platform should include fee management automations including the ability to send triggered email alerts to parents, school staff, and students.
- Unlimited Custom Fields (Assets, Tickets, and Users): The platform must support the creation of unlimited custom fields on assets, tickets, and user objects.
- Creation of custom Reports and Filtering on Any Asset Field: The platform must allow for custom report creating and views using any asset field in the platform, including any custom field, and fields populated via an MDM integration.
- Inventory audit management tools that enable creation of dynamic device audit schedules: Platform administrators must be able to create multiple audit policies with time flexibility based on any field including hardware type, location funding source, etc.
- Transfer of Assets to Different Locations: The platform must have a mechanism to transfer assets from one location to another. The transfer process must allow for attachments to document the move. The platform must allow for both individual and bulk transfers, with limited authorized users with access to bulk transfers.
